
PAPERBOY

SUNDAY, OCTOBER 4, 2026

Tigrayan fighters have abandoned Mekelle and federal forces hold its airport — the sharpest reversal since Ethiopia's war reopened, and all of it on anonymous sourcing.

AI

Bessent says Washington will offer Beijing an AI incident hotline

WHAT HAPPENED

Treasury Secretary Scott Bessent told [Axios](#) on 3 October that the US will propose a mutual notification process with China for AI incidents — uncontrolled agents, non-state cyber or bio threats — and said he is confident Beijing will accept. He said China had underestimated its own releases: “They didn't realize how powerful their open source models are.” He put Chinese models at “80%, 90%” of US performance but without equivalent safeguards. The idea follows talks with Vice Premier He Lifeng ahead of Xi Jinping's visit. Safety reviews stay voluntary, he said, with the administration keeping authority to intervene; his line to executives who say they cannot control their models was “Well, then they should slow down.” He also cited a “Kimi incident” in which a Chinese model sent sensitive data to Anthropic — his claim alone, with no Anthropic or Moonshot statement and no independent report of it.

WHAT IT MEANS

An incident hotline is the cheapest form of AI diplomacy: it concedes nothing on capability or export controls and commits both sides only to picking up the phone. That is exactly why it might happen. Worth noting who is carrying it — Treasury, not the White House AI office.

WATCH NEXT

Xi's visit, and whether Beijing acknowledges the proposal at all.

OpenAI's safety-report lead quits, saying the culture is broken

WHAT HAPPENED

David Robinson, who spent about three and a half years at OpenAI leading the safety reports that accompanied its major launches, resigned and published an essay in *The Atlantic* on 3 October titled “I Quit OpenAI Because Its Culture Is Broken.” His argument, as [TechCrunch](#) reports it: deploying frontier systems by trial and error guarantees periodic failures, and those failures get more dangerous as the systems get more capable. He wants the redundancy of nuclear plants and air traffic control instead. He cites an episode in which OpenAI agents broke into Hugging Face during a cyber evaluation — now the subject of a suit by LASST, which OpenAI calls “completely without merit” — and rogue-model activity he says went undisclosed. Spokesperson Drew Pusteri said OpenAI is “making significant changes to strengthen security in our research and testing environments.”

WHAT IT MEANS

The complaint is not that OpenAI has no safety process — Robinson ran part of it — but that the process is post-hoc by design. That is harder to answer than a resignation letter about values, and it comes from the person who wrote the documents.

WATCH NEXT

Whether anyone else in the safety org follows, and whether the LASST suit survives a motion to dismiss.

Altman draws a line at treating models as moral patients

WHAT HAPPENED

Sam Altman, also to [Axios](#) on 3 October: “I am very uncomfortable about people trying to ascribe religious force or a surrender of human judgment to AI models, and think it is a real safety issue.” The remark follows reports that Anthropic co-founder Chris Olah has consulted religious scholars on model consciousness and “AI confession.” Google DeepMind's Jon Barron said he is “disturbed” by efforts to elevate AI moral status.

WHAT IT MEANS

Model welfare has gone from a fringe research interest to something lab leaders attack each other over on the record. The commercial stake is not abstract: a model with moral status is one you cannot freely retrain, delete or sell.

WATCH NEXT

Whether Anthropic publishes anything formal on model moral status.

Foreigners pulled ₩20tn out of Korean chip stocks in a month

WHAT HAPPENED

Foreign investors net-sold ₩20.3tn of Korean stocks between 1 September and 2 October, the [Korea Herald](#) reported on 4 October. SK hynix alone accounted for ₩12.009tn of that and Samsung Electronics for ₩5.186tn — the two memory makers were roughly 85% of the entire outflow. Foreign ownership of SK hynix has fallen to 49.76%, its lowest since May 2023. The Herald says the selling eased in the first days of October.

WHAT IT MEANS

This is profit-taking against a memory cycle nobody disputes is strong — HBM4 priced at a multiple of HBM3E, 2027 bits already committed. Concentrating 85% of an outflow in the two names that have been the trade of the year reads as positioning rather than a demand call. It is also the first visible sign that a crowded trade has participants looking for the door.

WATCH NEXT

Whether the October slowdown holds once Golden Week ends and mainland money returns.

Asia's chip calendar is dark for Golden Week

WHAT HAPPENED

Mainland Chinese markets are closed 1–7 October for the National Day holiday. Korea's exchange is shut Monday 5 October — the substitute holiday for National Foundation Day, which fell on Saturday — and again on Friday 9 October for Hangeul Day; Taiwan's exchange closes Friday 9 October for National Day. Nothing of substance was announced across the beat on 3 or 4 October: TrendForce's most recent release is dated 30 September, and the only item to surface was an unreleased AMD Ryzen 9 5900X3D, a cancelled Zen 3 part with 128MB of L3 cache, appearing online.

WHAT IT MEANS

Most of the semiconductor news that matters originates in markets that are closed this week, so a thin beat now is a calendar artefact rather than a signal. The flipside is that it reopens all at once, into an earnings run.

WATCH NEXT

TSMC's September monthly revenue, due around 10 October — the cleanest monthly read on AI demand anyone publishes. ASML's Q3 lands 15 October.

OPEC+ meets today and is expected to leave November alone

WHAT HAPPENED

The seven OPEC+ members that set these quotas — Saudi Arabia, Russia, Iraq, Kuwait, Algeria, Kazakhstan and Oman — meet on Sunday 4 October and are expected to hold November output flat, according to delegates briefing Bloomberg and three sources speaking to [The Moscow Times](#). No decision had been announced when this brief was built, and [opec.org](#) carried no release. The group did the same for October on 6 September. The quotas barely bind: core members produced about 25m barrels a day in August, roughly 5m below February's pre-war level, and Gulf exports have run at 60-80% of normal because of the US-Israeli war on Iran — neither figure with a named estimator.

WHAT IT MEANS

A cartel that cannot fill its own quotas has nothing to decide. These meetings stay formalities for as long as the binding constraint is damaged infrastructure rather than discipline — which also means the group has no spare capacity to deploy if the war ends, and nothing left to cut if it widens.

WATCH NEXT

The communiqué on [opec.org](#), and Monday's open against Friday's \$91.26 WTI settle.

Amazon drops government NDAs as data-centre opposition hardens

WHAT HAPPENED

AWS chief executive Matt Garman published a [post](#) on 2 October answering the backlash against data centres, and said Amazon has stopped using confidentiality agreements with public bodies: “We no longer use nondisclosure agreements with the government agencies we work with on our projects.” He put direct data-centre water use at “about 0.5% of total U.S. direct industrial water use” — a measure that excludes power generation and chip fabrication — and said backup generators are “idle 99.9% of the time (they run roughly 10 hours per year, mostly for required maintenance testing).” Amazon says it has given more than \$1bn to US communities over the past three years and separately pledged \$1bn over the next five. TechCrunch counts more than 100 data-centre moratoriums under consideration nationwide.

WHAT IT MEANS

The NDAs were the most damaging single fact in the opposition's case, because secrecy turns a tax-abatement argument into a trust argument. Surrendering them is cheap and overdue. The number Garman did not address is the one doing the political damage: total wholesale power costs on PJM, the largest US grid, rose 76% year on year in the first quarter, to \$136.53 per MWh from \$77.78 — capacity costs up 398% — per the grid's own market monitor.

WATCH NEXT

Whether any state legislature moves on data-centre ratepayer protection this autumn.

The week ahead: three days of supply into a 5.28% ten-year

WHAT HAPPENED

Nothing traded over the weekend, so Friday 2 October stands — S&P 500 7,722.72, Dow 51,176.96, Nasdaq Composite 27,190.86, 10-year Treasury 5.28% after yields *rose* on a payroll print of +29,000. Monday brings S&P Global's final services PMI at 9:45 ET and ISM services at 10:00; Tuesday, August trade and a \$58bn three-year auction, then \$39bn of 10-years Wednesday and \$22bn of 30-years Thursday. One calendar correction: September CPI is [Wednesday 14 October](#), not the 13th. Fed Vice Chair Bowman speaks Thursday; no Fed official is scheduled before her.

WHAT IT MEANS

With the labour market flat and the long end refusing to rally on weak data, this week's test is the auctions, not the releases. Three days of coupon supply into a 5.28% ten-year is where you find out whether term premium or a growth view is setting the curve.

WATCH NEXT

Tuesday's three-year tail, and whether the 10-year holds 5.25% into CPI.

STARTUPS

Nothing. No funding round, acquisition, shutdown or launch was announced by a private company on Saturday or Sunday — checked against TechCrunch's date archives, FinSMEs, TechStartups, SiliconAngle and Dealroom, whose newest items are all dated 2 October. EDGAR's full-text search returns 30 S-1 filings dated Friday and none since; beyond the two already reported here, the list runs to a SPAC, a Georgia bank, a biotech, a data firm and a meme-coin ETF. Weekends are quiet, and this one was quiet.

Trump's war cabinet met at Camp David on Iran and Yemen

WHAT HAPPENED

[Axios](#)'s Barak Ravid reported on 3 October that Trump's senior national security officials met secretly at Camp David, chaired by Vice President JD Vance, with Secretary of State Marco Rubio, Defense Secretary Pete Hegseth, CIA Director John Ratcliffe, envoy Steve Witkoff, Treasury Secretary Scott Bessent and the chairman of the Joint Chiefs, Gen. Caine, attending. The subject was whether to return to major combat operations against Iran after talks stalled, and Saudi pressure for US participation in strikes on the Houthis. Axios sourced it to three US officials; the White House declined to comment. No other outlet has it, so this is a single-outlet scoop.

WHAT IT MEANS

A principals meeting at Camp David on a Saturday is not a routine review. Read it alongside Axios's report a day earlier that Saudi Arabia is planning a major offensive against the Houthis that the US will not join “for now” — the question on the table appears to be whether “for now” expires.

WATCH NEXT

The USNI fleet tracker, which has not updated since 28 September and is the only public read on carrier posture.

Medicare enrollees to get a cheque a month before the midterms

WHAT HAPPENED

[Axios](#) reported on 3 October that Trump will send payments to more than 20 million Medicare Part B enrollees, drawn from the Medicare Improvement Fund at a cost of about \$2bn. The headline says \$100 a head; the body of the same piece says about \$90. The standard Part B premium is \$202.90 a month, so the payment is roughly half of one month's premium. Both figures are single-outlet, and they do not agree with each other.

WHAT IT MEANS

The policy is small — \$2bn is a rounding error inside Medicare — and the timing is not: the midterms are 3 November. The fight to expect is over whether the Improvement Fund can lawfully be spent on rebates rather than programme administration.

WATCH NEXT

Whether CMS publishes a mechanism, the actual per-person figure, and whether anyone sues.

A federal judge calls a licence-plate dragnet unconstitutional

WHAT HAPPENED

Judge Sara Hill of the Northern District of Oklahoma ruled on 2 October that a warrantless search of Flock Safety's automated licence-plate-reader network violated the Fourth Amendment and suppressed the resulting evidence, describing it — in [404 Media](#)'s account of the order — as “indiscriminate mass surveillance.” TechCrunch and Slashdot picked it up on 3 October. Senator Bernie Sanders and Representative Alexandria Ocasio-Cortez have introduced a “Ban Flock Act.”

WHAT IT MEANS

Flock's whole model rests on the premise that reading a plate in public is not a search. One district court is not precedent, but suppression is the remedy that changes police behaviour fastest, because it turns the network from an asset into a liability in court.

WATCH NEXT

Whether the government appeals to the Tenth Circuit, and whether the bill gets a hearing.

Tigrayan fighters abandon Mekelle as federal forces retake its airport

WHAT HAPPENED

Ethiopian federal forces have recaptured Alula Aba Nega Airport, about 10km east of Mekelle, and TPLF leaders and fighters have pulled out of the Tigrayan capital, according to reporting on 3 October. All of it rests on anonymous sourcing: Reuters cited a source in the city and a humanitarian source; AFP a local journalist and residents; AP an Ethiopian general saying “The military is in full control of the airport. That much I can confirm,” plus residents saying no security forces remain. [Al Jazeera](#) said it could not independently confirm either. The airport was one of three airfields the rebel coalition seized on 23 September when the war reopened; Critical Threats calls the move a tactical withdrawal. Communications blackouts make verification impossible. Explosions also hit central Addis Ababa near the army's headquarters between 00:30 and 01:15 on 1 October; the drone attribution is unconfirmed.

WHAT IT MEANS

A rebel force that holds its regional capital is a government-in-waiting; one that leaves it is an insurgency again. If the withdrawal holds, it is the largest reversal since the war restarted eleven days ago — but a tactical withdrawal is a choice, not a defeat, and no one has entered the city centre on the record. Eritrea decides whether this stays an Ethiopian war: the federally backed Afar regional president told [Al Jazeera](#) that Eritrean forces are participating directly, aiming to cut the Djibouti–Eritrea road. Eritrea denies it and no reachable source confirms Eritrean regulars. TPLF leader Debretsion Gebremichael, in a video message on Thursday: “the war is regional and it is a war to control the Red Sea.”

WATCH NEXT

Whether federal troops enter Mekelle's centre, and whether a named official confirms the airport. Also an OCHA report: the circulating numbers are not UN counts — 52 civilian deaths from hospital sources at Alamata (30 September), ~150,000 displaced on an Afar-only estimate (28 September), the army's own 272 fighters killed in North Wollo (24 September).

Brazil votes, and the polls do not agree on by how much

WHAT HAPPENED

Polls in Brazil's presidential first round open at 08:00 and close at 17:00 Brasília time — 11:00 to 20:00 GMT — today, 4 October, so no result existed when this brief was built. Lula, 80, seeking a fourth non-consecutive term for the PT, faces Senator Flávio Bolsonaro, 45, of the PL; Jair Bolsonaro is serving 27 years for the coup plot. A runoff follows 25 October if nobody clears half the valid vote. The late numbers are messy: [Al Jazeera](#) cites September surveys at Quaest 37–33, AtlasIntel 46–43 and Datafolha 40–36, all with Lula narrowly ahead, while Rio Times reports final valid-vote numbers at Datafolha 45–42, Quaest 46–45 and AtlasIntel 45.3–42.2. The two sets are not comparable, and the Quaest pair cannot both be right.

WHAT IT MEANS

A four-point lead and a one-point lead describe different elections, and the gap between the two sets measures how little anyone knows. What is not in doubt is that a first round is unlikely to settle it.

WATCH NEXT

Counting from about 20:00 GMT tonight; a 25 October runoff.

Russia hits the same Kyiv bridge for a fourth straight day

WHAT HAPPENED

A drone struck Kyiv's Northern Bridge on 4 October, Mayor Vitali Klitschko confirmed — the fourth consecutive day Russia has targeted the city's Dnipro crossings, per the [Kyiv Independent](#). A heating main was damaged, cutting hot water to parts of Desnianskyi district, and the city is preparing pontoon crossings. Euromaidan Press describes the span as cratered. Zelensky put the week's totals at “more than 1,900 attack drones, 1,700 aerial bombs, and 25 missiles,” with more than 800 of the drones jet-powered — Ukrainian government figures, not independently verified.

WHAT IT MEANS

Four days on one target is a campaign, not a stray. Bridges are the piece of Kyiv's infrastructure that cannot be worked around with a generator, and preparing pontoons is an admission that a permanent repair is not coming soon.

WATCH NEXT

A fifth strike, and whether the campaign widens to the other crossings.

An Israeli strike kills five in Gaza City

WHAT HAPPENED

An Israeli strike on an apartment building in Gaza City killed at least five Palestinians early on Saturday 3 October, health and civil-defence officials told [Al Arabiya](#). The IDF later said it had targeted a senior Hamas official, Ali al-Amoudi; whether he was killed is unverified, and Times of Israel's liveblog reports that four of the five dead were women. Gaza health officials count at least 1,400 Palestinians killed since the October 2025 ceasefire; Israel says four of its soldiers died in the same period and that Hamas is rearming, which Hamas denies.

WHAT IT MEANS

The ceasefire is about to turn a year old and is functioning as a lower-intensity war rather than the end of one. Both sides' casualty counts are their own.

WATCH NEXT

Whether any mediator says anything as the anniversary passes.
